

- Introduction
- Light & Endoscopy
- X-Rays
- Magnetic Resonance Imaging
- Nuclear imaging
- Ultrasound imaging

- Introduction
- Light & Endoscopy
- X-Rays
- Magnetic Resonance Imaging
- Nuclear imaging
- Ultrasound imaging

- Short History :
- Photography, XIXe.

Short History :

- Photography, XIXe.
- 1895 Roentgen discovers X-Rays

Short History :

- Photography, XIXe.
- 1895 Roentgen discovers X-Rays
- 1896 First Fluoroscopes (Thomas Edison)

Short History :

- Photography, XIXe.
- 1895 Roentgen discovers X-Rays
- 1896 First Fluoroscopes (Thomas Edison)
- 1900 X-Rays become popular

Short History :

- Photography, XIXe.
- 1895 Roentgen discovers X-Rays
- 1896 First Fluoroscopes (Thomas Edison)
- 1901 Roentgen receive the fist Nobel Price of Physics

Short History :

- Photography, XIXe.
- 1895 Roentgen discovers X-Rays
- 1896 First Fluoroscopes (Thomas Edison)
- 1901 Roentgen receive the first Nobel Prize of Physics
- 1914-1918 used to cure soldiers

Short Story

- 1917 Radon invents the bases of tomography.
- 1960 Allan Mac Cormack publishes the idea of scanner.

Short Story

- 1917 Radon invents the bases of tomography.
- 1960 Allan Mac Cormack publishes the idea of scanner.
- 1972 First Medical X-Ray Scanner (Hounsfield)
- 1979 Hounsfield and Mac Cormack receive the Nobel Price of medicine

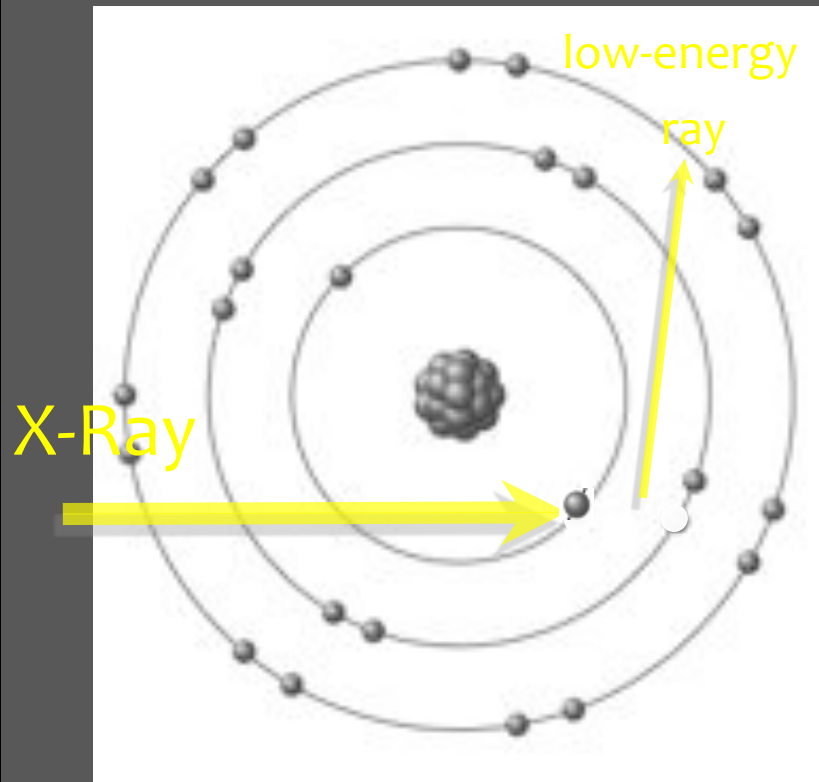

X-Ray Production

- ▶ Acceleration of a ray of electrons to hit tungsten anode

Interaction X-Ray / Matter

Photoelectric Effect

- ▶ low energy X-Rays
- ▶ appears when
 - high matter density
 - Z^3
 - Large for
 - ▶ lead ($Z=82$)
 - ▶ barium ($Z=56$)
 - ▶ iodine ($Z=53$)

Interaction X-Ray / Matter Photoelectric Effect

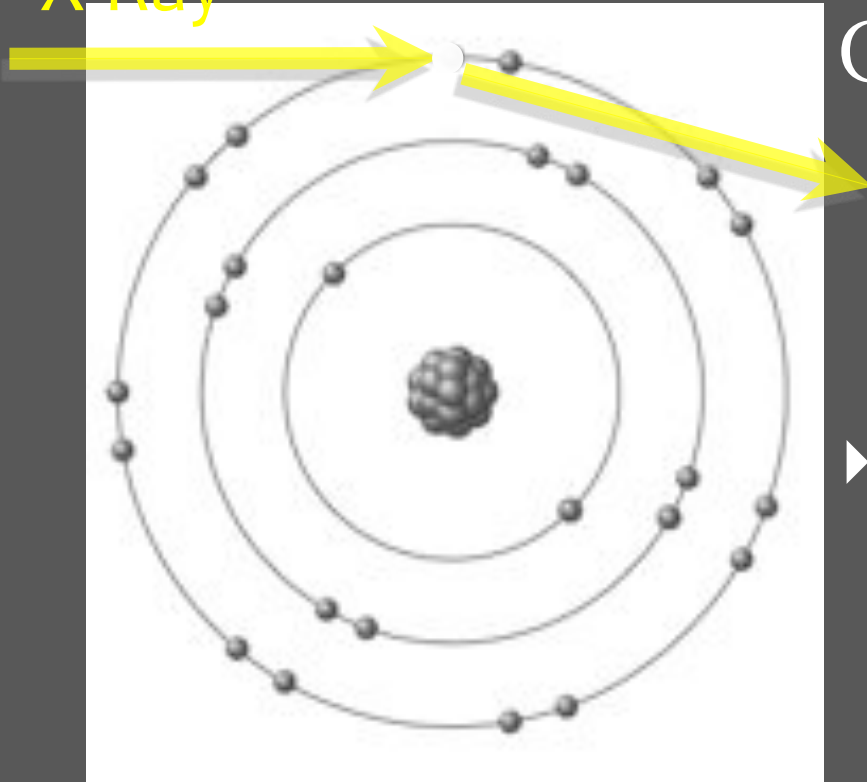

➤ Consequences

- ▶ X-Ray stopped
- ▶ Production of a photon
- ▶ Production of a cation

X-Ray

Interaction X-Ray / Matter Compton Effect/Scattering

- ▶ high energy X-Rays
- ▶ appears when
 - ✓ high matter density
- ▶ Consequences
 - ▶ X-Ray deviated
 - ▶ loss of energy
 - ▶ Production of a photon
 - ▶ Production of a cation

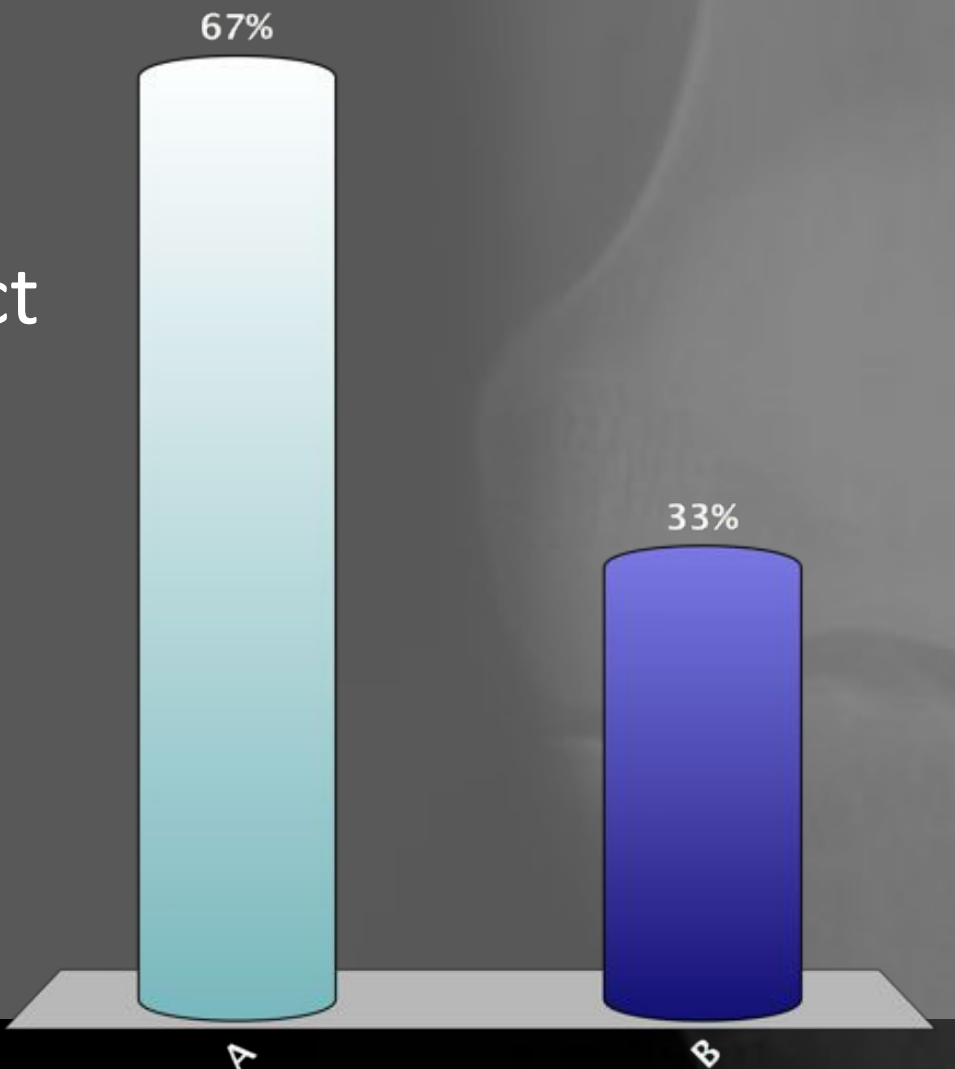

X-Ray Photography

Principle: attenuation of X-Rays differs according to tissues (thickness, density, Z , X-Ray energy)

During X-Ray imaging, images gray levels are due to

- A. The Compton Effect
- ✓ B. The Photoelectric Effect

- X-Ray Attenuation

$$I_R = I_S e^{-\mu x}$$

I_S : source intensity

I_R : measured intensity

μ : attenuation coefficient

Hounsfield Units

$$\frac{\mu_X - \mu_{H_2O}}{\mu_{H_2O}} \times 1000 HU$$

Tissue	Hounsfield Unit
Air	-1000
Fat	-120
Water	0
Muscle	+40
Bone	+1000

On this X-Ray image, A represents...

- A. Air
- ✓ B. Bone
- C. Muscle
- D. Skin/Fat

M2 MoSIG

Medical Imaging Simulation & Robotics

On this X-Ray image, B represents...

- A. Air
- ✓ B. Bone
- C. Muscle
- D. Skin/Fat

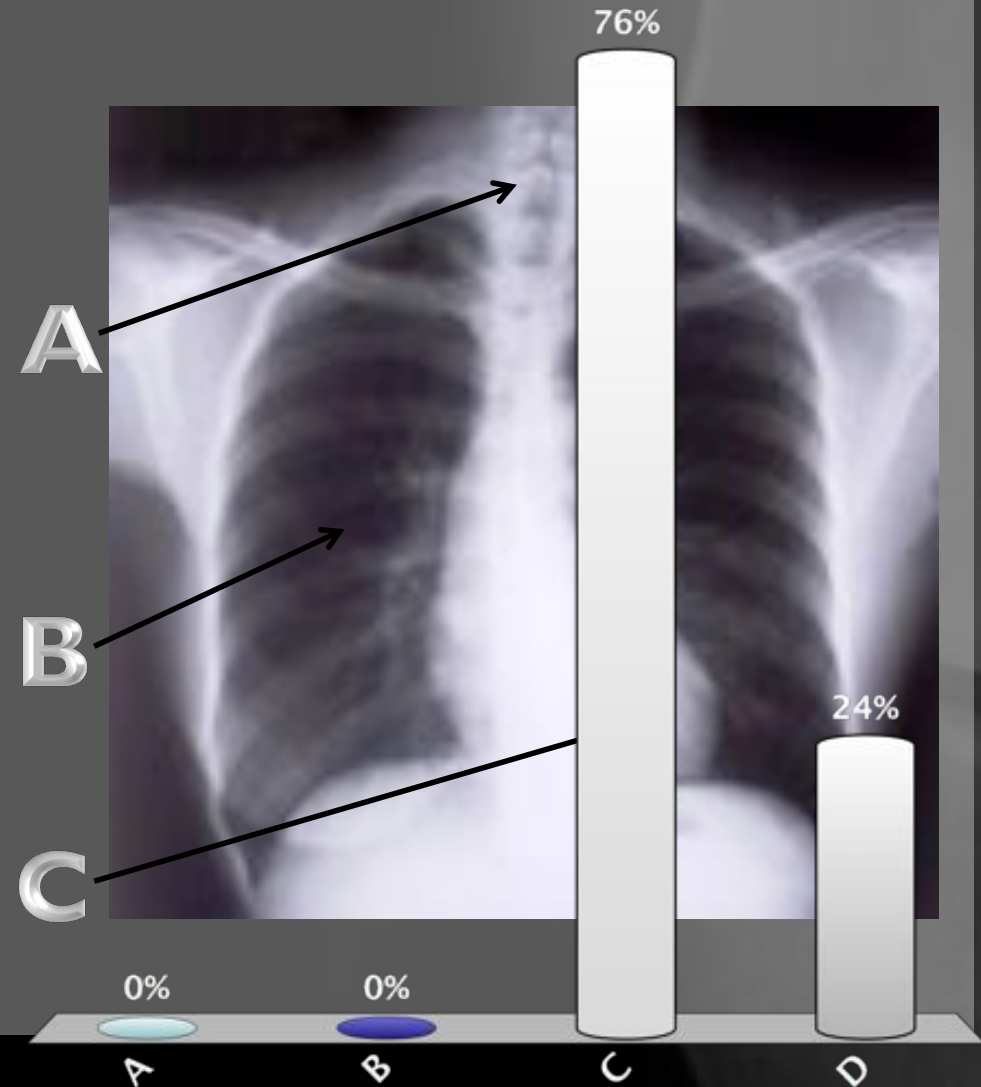

M2 MoSIG

Medical Imaging Simulation & Robotics

On this X-Ray image, C represents...

- A. Air
- B. Bone
- ✓ C. Muscle
- D. Skin/Fat

X-Ray Photography

- Examples

Fracture

Mammographie

Tube digestif

X-Ray Photography

- Contrast Media (angiography)

Fluoroscopy

- low-energy x-rays
- continuous and real time imaging

[Another Video](#)

X-Ray 2D images

- Anatomical Information
- Good contrast bone/soft tissues
- 70% of medical images
- Dangerous
 - precautions must be taken for patients (definition of dose and areas exposed to x-rays) and for radiologist
- Loss of information 3D -> 2D

Computed Tomography

Mac Cormac's idea: 2D reconstruction from 1D Projections

Computed Tomography

Mac Cormac's idea: 2D reconstruction from 1D Projections

Computed Tomography

2D reconstruction from 1D projection

- ill-posed problem
- filtered back projection

Computed Tomography

Principle

Computed Tomography

Computed Tomography

Scanner

Reconstruction mathématique

M2-MOSIS

- 3D from 2D

- 1971

- late 80'

- Example

- 1 : right kidney
- 2 : kidney artery
- 3 : aorta
- 4 : left kidney
