

Using Ghidra

Type ghidraRun to run Ghidra on the ensimag machines ...

- Create a new Project ``File -> New Project`` (Non-Shared Project)
- Give a name to this project (ex: BoF)
- Click on codebrowser (the dragoon icon)
- Import the executable file : File -> import -> bof
- Run the analysis and look at the function (decompiled) code using Symbol Tree -> functions
- To better see the Control-Flow Graph you can also select Window -> Function Graph
